Subject: more information is needed

dear sirs

please develop hydro sites on island e.g. sites on exploits river where cost will be lower and transmission shorter—have already been indentified br former paper company—this is only one of many rivers on the island that has hdro sites

one of the largest cost and the unknown is the transmission of electricity to both Nova Scotia and Newfoundland

The ice storm in Ontario and Quebec cost Quebec hydro 800 million dollars to repair

please ask Quebec hydro for their expertise in this matter and if they would be interested in deveioping these hydro sites--they are not the enemy

fortis--why haven't they been involved

i believe our government have jumped the gun and awarded huge contracts to the engineering firm

sincerely yours
